Letter No. 101u-154-84

March 25, 1970

Mr. W. K. McPherson  
 Director of Engineering  
 Chrysler Australia Limited  
 G. P. O. Box 1320F  
 Adelaide, South Australia

Dear Walter:

Subject: Production Car Racing

Reference: My letter #30 of February 21, 1970

I have now shipped the last of the parts and spares to build the 340 test car. There are three shipments:

1. MSR F2W 7359 on "Lake Ontario" scheduled Sydney 4/9/70.
2. MSR F2W 7366 Air Freight - 3/26/70.
3. MSR F2W 7367 Air Freight - 4/3/70.

Attached are parts lists for each shipment.

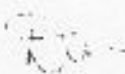

Although I have not heard any word lately on this subject, I assume that the test car will be built and run since the engine and parts are already paid for. The primary concern is the proper construction of the car. Even though the suspension has been on a car before, your chassis will require some frame rail modifications. The engine is fresh, and there are a fair number of new or spare parts. The parts for RHD steering are new and represent a good guess at what will give a satisfactory toe pattern, etc. Other parts will have to be evaluated at the track; carburetor, cams, wheels and differential unit.

There is practically no design information to back up these special parts. Hopefully, you will be able to make some kind of order out of the apparent chaos. We will assist you, of course, but at this time with current budget restrictions, we must look to you for direction as to what assistance is necessary.

I will close our project with this letter subject to any reopening needed in response to added requests you may make.

Best regards,
